Among the Paez, fishing with

/145 cont./

226 824 poisonous plants is done once a year, in the dry season, as community fishing with weirs. For this purpose -- it was explained to me -- a dam of stones and earth is first made by the men. The herbs, which only grow high in the mountains and contain a poisonous substance, and which have been pulverized with stones, are tossed into the pool thus partitioned off. These herbs are called yúkse or kēse. The fish are said to die from them immediately. /146/ They are caught only by the men. But since the poisonous herbs are so far away and are to be found only with difficulty, the men are said to catch the fish sometimes unpoisoned at the weirs with their bare hands.

f) Weapons

411 The weapons of the Paez are limited to hunting weapons [726] and children's toys, since wars are no longer fought. The only important hunting weapon today is the shotgun. As children's [524] playthings there are the stone-sling (ísot), blowgun (pāt), and in in recent times the elastic sling (káučéro).

[824] [714] [237] [124] [175] In former times, in the battles with the Spaniards, the Paez were said to have used lances 25 handspans long made from the wood of the chonta palm, as well as plaited shields or shields of tapir skin (Pittier, p. 327). I could find no confirmation for the present-day or even earlier use of lance and shield; my informants were familiar with neither the word nor the object. From the chroniclers, however, it is reported that the Paez, as well as other mountain peoples of this region, had learned from their battles with Spanish horsemen to defend themselves with long lances. There is, however, absolutely no foundation for a pre-Spanish use 714 of this type of lance. It is not unlikely that the Paez originally had plaited shields (opimb). The word for skin shield (himba-kat) is interesting; its present literal meaning is "horse skin." Whether himba meant "tapir" in pre-Spanish times cannot be ascertained.

/146 cont./

726 [725] [777] [411] In order to defend their mountain country the Paez also used large rocks which they hurled down on the attackers from the heights. They, too, however, soon succeeded in obtaining iron and iron weapons. In their battles at the time of the Conquista they were already using swords and machetes.

411 726 773 628 411 191 The stone-sling plaited of agave fibers, whose manufacture is described below (see under "Plaiting" /see pp. 85-86 /), is of great importance mythologically in the battles with the "Pijao." For geographical reasons it is the typical weapon of the American mountain peoples from Tierra del Fuego to Canada, whereas the blowgun, for similar reasons, is the typical weapon chiefly of the Amazonas and Orinoco forest area. The simultaneous occurrence of blowgun and sling is found all the way from Mexico to Ecuador and in Bolivia (Friederici, 1911, pp. 71-73, Pl. 13).

411 [462] [857] [223] /147/ The blowgun of the Paez consists of a single barrel and is very simple in its construction. It is made only by men, but for bird-hunting is used almost solely by boys. To make it, one uses the thin, straight trunk of the fíza tree, the pith of which is burned out with a long iron tube about eight millimeters in diameter and heated red-hot. The length of the tube is two to three meters. No special mouthpiece is attached. As a sight a little piece of beeswax is pasted above the mouth of the blowgun. [824] The ball-shaped fruits of the smbák tree, which have exactly the right caliber when green, are used as shot. The range amounts [211] to about 20 meters. The accuracy of the shot is not great. Nevertheless, there are boys who have carved more than 20 notches above the blowhole of the tube as a record of the birds killed.

4. Crafts and Techniques

a) Treatment of Fibers

283 The fiber material used by the Paez for plaiting, weaving, nets, or ropes is primarily agave, cotton, or sheep wool. Agave and cotton are ancient American fiber plants whose homeland is probably Central America, while working with sheep wool has its tradition in the Peruvian Highlands, in working with llama or

/286 cont./
182 no new harvest may be undertaken until the teyu has first cleansed
756 of the pest the building site or the crops, respectively.

/287/ He is, however, not only the protector of the individual or the individual family, but is also responsible for the beneficial
[773] co-existence of the members of the whole village. Thus, it is not surprising that it was the shamans -- besides Thunder under his various names -- who were the war leaders in the mythical tradi-
[726] tions. Thanks to their magical gifts and strength, they successfully led their people against the Pijao and the Spaniards. Several times the elders of the various villages told us that one day Thunder will again drive the white intruders out of the Tierradentro of the
[648] Paez and kill them. And it is only logical that, as late as 1952,
[789] on the occasion of an impending attack by an armed group of white revolutionaries, the shaman of Santa Rosa, as the successor of the mythical Thunder, should spit his magic herbs on the road leading to the village, in order to destroy them. Old Felisa Ipia is behaving in a similar manner when she keeps the souls of all the village inhabitants gathered together in the threads of her shaman's staff, in order to be able to protect them better against evil, magical influences.

756 On account of these certain supernatural abilities of theirs, the
554 effects of which no one in the community can evade, the teyu
[825] have a certain unofficial authority. In addition, they are all at least 30 to 40 years old and thus, by their very age, fulfill one of the natural prerequisites for recognition by the community. Not a few of them feel honored by this, set apart from the great mass of people, but many assured me that they were shamans only unwillingly, that though they were called by their ability to receive signs, they were nevertheless oppressed by the weight of the burden of their responsibility.

756 During times of epidemics of disease or inexplicable, "super-
124 natural" deaths, they are the focal point of the community, to
[182] which no one appeals in vain. And in conversations with them we generally had the distinct impression of facing unselfish, helpful human beings. They make no secret of their activity, and they tried, as best they could, to tell us about their experiences and knowledge which they use for the good of the community.

Moguez

the fire and turns on the lights, and everyone returns to examine a layer of fine ashes placed beforehand at the door. If the ashes shows the footprints of an angel, they believe that the soul is saved, but if the footprints are those of a bird, they believe that the soul is condemned to hell. In some cases they ascertain the fate of the soul by the kind of bird prints.

WARFARE

The *Páez* and *Moguez* were particularly warlike. Their attacks were staged in the morning, accompanied by yells and the sound of trumpets, horns, sea shells, and drums. They were generally armed with great spears or pikes, spear throwers, and slings. When fighting, they would first hurl javelins with their spear throwers, then use their slings, the missiles for which they carried in a pouch, and finally pick up their spears or pikes for man-to-man struggle. They also formed closed squadrons, men with clubs alternating with spearmen. The former would step forward to wield their clubs, and then draw back to their positions for protection. Their best defense was on high ridges, from which they rolled large stones on their enemies. They perfected these natural defenses by cutting or camouflaging paths on which they prepared ambushes. They built trenches or pitfalls, which caused the attacking Spaniards much trouble.

The principal enemies of these peoples were the *Pijao* and the Spanish soldiers. The *Páez* remember the *Pijao* well, and call the stone statues in their territory "portraits of Pijaos," and the painted tombs, "houses of Pijaos." They are afraid to see the statues or visit the tombs.

To insult an enemy killed in war, they cut off his penis and placed it on the road.

Some historians ascribe cannibalism to the *Páez* and the *Moguez*, which seems to have no basis in fact. They kept trophy heads and stuffed the skins of their enemies, but did not eat their foe. There are, however, numerous historical references which state that in the wars against the Spaniards, the *Páez* left the bodies of dead enemies for the *Pijao* to eat, and that they cremated their own dead or dried them over a slow fire, which Friar Pedro Simón (1882–92, ch. 23) mistook for a means for preserving the flesh so that it could be eaten later.

As war trophies, they kept enemy heads, which they preserved with resins, and the skins of their entire bodies, which they filled with ashes (Aguado, 1931, vol. 3, book 16, ch. 3). They even preserved the heads of the Spaniards' horses. They carried these trophies to wars, meetings, and feasts.
